DETAILED ACTION

The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.

Claim Rejections - 35 USC § 112

Claims 19-28 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the enablement requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention.

The invention is not enabled for the **claimed** method. Applicant argues that one of ordinary skill in the art would know how to administer the claimed invention, but that is not the issue at hand. Alzheimer's disease, senile dementia and Parkinson's disease are all diseases for which there is no known cure or prevention. The invention reads on preventing these diseases see applicant's specification at page 5-6 where it is established that Parkinson's and Alzheimer's are associated with excessive degrees of apoptosis. Further, there is no evidence on the record that Alzheimer's or Parkinson's was prevented. Thus, the level of enablement to prevent against such diseases is quite high. Applicant's claims are drawn to a method which is very unbelievable on its face.

This is due to the fact that there is no prevention for these conditions/diseases. Thus, without conclusive evidence to show that these diseases have been prevented, the invention is not enabled by the instant specification.

Applicant argues that they are not preventing Alzheimer's or Parkinson's which have no known prevention or cure but in fact they are allegedly "alleviating or protecting against the *symptoms* of a neurological medical disorder *involving* accelerated rates of apoptosis in a mammalian body". Who would not think that, that refers to Alzheimer's or Parkinson's when such diseases are well known to be neurological medical disorders. Further, the claims are limited to *involving* accelerated rates of apoptosis in a mammalian body not mediating it. This still reads on preventing diseases such as Parkinson's since these diseases are involving accelerated rates of apoptosis. Applicant even admits on pages 5- 6 of their specification, that increased rates in apoptosis are known to occur in disease/conditions such as Alzheimer's and Parkinson's.

Once again it is emphasized that the claims are drawn to "alleviating or protecting against the *symptoms* of a neurological medical disorder *involving* accelerated rates of apoptosis in a mammalian body" not alleviating or protecting against the *symptoms* of a neurological medical disorder mediated by accelerated rates of apoptosis in a mammalian body.

It is suggested that applicant limit the claims to treatment. If applicant limits the claims to treatment the invention may be allowable.

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
